

## EZ-PROXY CONFIGURATION FOR OECD ILIBRARY

### PURPOSE

**This document outlines the recommended configuration to be used with a proxy server when accessing content on OECD iLibrary.**

### BACKGROUND

Institutions deploying a proxy server for users connecting to shared network services require a particular configuration of the proxy server to make use of all features available on OECD iLibrary. Some parameters are necessary to work with the dynamic databases (OECD.Stat) and customize the default view of datasets.

OCLC has confirmed the configuration (stanza) for its EZ-Proxy product and the same settings should work for other proxy servers.

**We strongly recommend to update proxy servers to the most current version in order to allow the continued functionality for OECD iLibrary with a secure HTTP protocol (https) – <https://www.oecd-ilibrary.org>.**

### HOW-TO

**Subscribing institutions should contact their IT teams to verify or update their proxy server configuration for OECD iLibrary. Here is the recommended configuration:**

```
